How to use this PARTS LIST

The unit nameplate identifies the pump by its pump combination number. Specific pump information is determined by identifying both the pump combination and the motor horsepower which is noted on the motor nameplate.

All model numbers identify the following information:

DOMESTIC™			
SERIES CC™			
MODEL 93CC			
SERIAL QD XXXX - XXXXX			
GPM 9	PSI 30	PUMP 616	
CFM	IN. HG.	PUMP	
DWGS			
POWER V. 460	PH. 3	HZ 60	
CONTROL V. 115	PH. 1	HZ 60	
TOTAL F.L. AMP.	LARGEST MOTOR F.L. AMP.		
Bell & Gossett			

DOMESTIC™			
SERIES 616PF™		GPM 9	
SERIAL QR XXXX		PSI 30	
Bell & Gossett			

The nameplates identify the pump in the examples as a 616 PF (Domestic Series C-35) rated for 9 GPM at 30 PSI. The larger nameplate notes that this pump has been furnished on a Series CC Condensate unit, Model Number 93 CC. The smaller nameplate identifies a pump that has been furnished separately.

The following procedure will result in proper parts selection:

1. Determine from the nameplate the pump combination and its capacity.
2. Refer to the motor nameplate to determine the correct motor horsepower.
3. Refer to the index to identify the appropriate page for parts selection.
4. For pumps that are available in multiple horsepower find the correct column on the pump combination page.
5. Using the referenced drawing for the pump, select the appropriate parts.
6. When ordering impellers, be sure to specify the required diameter on the order. If a diameter is not specified, a full size impeller will be furnished. (*Caution: Trimmed impellers may not be returned to the factory for credit.*) For impeller trims consult the appropriate full unit parts list.

A Word About Obsolete Pumps

During the time that Domestic & Hoffman Pump Products have been offered, a number of design changes have occurred that necessitate the obsoleting of certain pump combinations. The following list attempts to address the more frequently requested pump identifications.

610 PF pumps were discontinued in 1984. At this printing, limited parts may still be obtained. Consult the factory or your representative for availability. Capacities formerly requiring the 610 PF are now handled by the 609 PF or the 616 PF. Use of the 609 PF requires a change in discharge location.

611 PF pumps were discontinued in 1975. No parts are available. Consult the factory or your representative for alternative replacement pump and motor assemblies.

612 PF pumps were discontinued in 1984. The 616 PF is a direct replacement. Parts from the current 616 PF pump are dimensionally interchangeable with the 612 PF parts.

613 PF pumps in 1½, 2 & 3 HP were discontinued in 1984. At this printing limited parts may still be obtained. Consult the factory or your representative for availability.

614 PF pumps in 3 HP were discontinued in 1984. At this printing, limited parts may still be obtained. Consult the factory or your representative for availability.

615 PF pumps were discontinued in 1975. No parts are available. Consult the factory or your representative for alternative replacement pump and motor assemblies.

627 PF pumps in 2 HP were discontinued in 1984. At this printing, limited parts may still be obtained. Consult the factory or your representative for availability.

650 PF pumps in 1½ & 2 HP were discontinued in 1990. At this printing, limited parts may still be obtained. Consult the factory or your representative for availability.

651 PF pumps in ¾ HP were discontinued in 1990. At this printing, limited parts may still be obtained. Consult the factory or your representative for availability.

653 PF pumps were discontinued in 1992. The 673 PF is a direct replacement. Parts from the current 673 PF pump are dimensionally interchangeable with the 653 PF parts.

655 PF pumps were discontinued in 1988. At this printing, limited parts may still be obtained. Volutes and impellers are ordered on an as required/non-cancelable basis with extended lead-times. Consult the factory or your representative for parts availability. Consult the factory or your representative for alternative replacement pump and motor assemblies.

657 PF pumps were discontinued in 1992. The 673 PF is a direct replacement. Parts from the current 673 PF pump are dimensionally interchangeable with the 657 PF parts.

664 PF pumps were discontinued in 1988. At this printing, limited parts may still be obtained. Volutes and impellers are ordered on an as required/non-cancelable basis with extended lead-times. Consult the factory or your representative for parts availability. Consult the factory or your representative for alternative replacement pump and motor assemblies.

666 PF pumps were discontinued in 1988. At this printing, limited parts may still be obtained. Volutes and impellers are ordered on an as required/non-cancelable basis with extended lead-times. Consult the factory or your representative for parts availability. Consult the factory or your representative for alternative replacement pump and motor assemblies.

 - Shaded items are recommended spare parts.

⁽¹⁾ Specify required diameter when ordering. If diameter is not specified full diameter will be furnished.

⁽²⁾ For units manufactured after 1992. Units manufactured before 1992 should replace impeller and wearing ring as a pair.
Units manufactured before 1992 needing wearing ring only should order DP0483. Old style impellers are no longer available.

⁽³⁾ For vacuum pumps only - used on 100 & 150 VC & VCD units or 100 S (or D) 5-17 MJ units.

Check **Xylem Bell & Gossett Motor Status Listing** for current stock status. **Specials** require extended lead times.

Note: 620 PF, PVF (C-35) & 620 PF-B, PVF-B (B-35) pumps require shaft extensions.

Note: C-17 (3/4 HP through 2 HP) pumps require shaft extensions.

Shaft extensions and drive-lock pins should be ordered as separate items.

For explosion proof motors, please consult factory.

Mounting Location for Shaft Extensions

Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services, and agricultural settings. With its October 2016 acquisition of Sensus, Xylem added smart metering, network technologies and advanced data analytics for water, gas and electric utilities to its portfolio of solutions. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
