Plumbing

TacoGenie® Hot Water Circulator

TacoGenie® provides instant hot water while saving up to 12,000 gallons of water per year. The small, quiet pump attaches to the hot and cold water lines in the cabinet under the most remote kitchen or bath fixture in the home. TacoGenie circulates hot water from the water heater and returns the cooled water back through the cold water line. When hot water arrives at the faucet, TacoGenie automatically shuts off to prevent excess hot water in the cold water line.

- On demand instant hot water control
- Easy installation
 - Uses existing plumbing
 - Installs in just 8 simple steps
- Optional wireless push button or motion sensor available
- Full 3-year warranty

Features

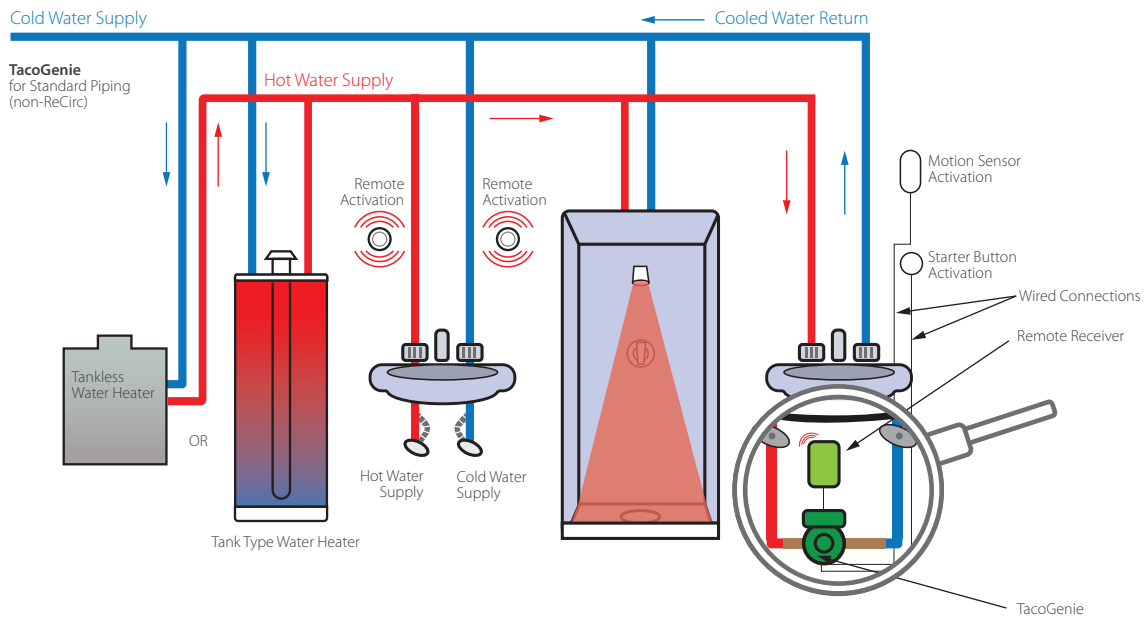

Hot water when **YOU** want it

- Circulates hot water when activated, providing instant hot water comfort
- Saves water by recirculating cool water back to the water heater
- Easy to install – Uses existing plumbing; no need to drain the system; no demolition & repair
- Available for use with tankless or standard tank type water heaters
- Saves energy by reducing the inefficiencies of constant hot water circulation
- Upgrade with the optional wireless push button starter or hard-wired motion sensor
- TacoGenie provides instant hot water while preserving the warranty that many tankless water heater manufacturers require for recirculation applications

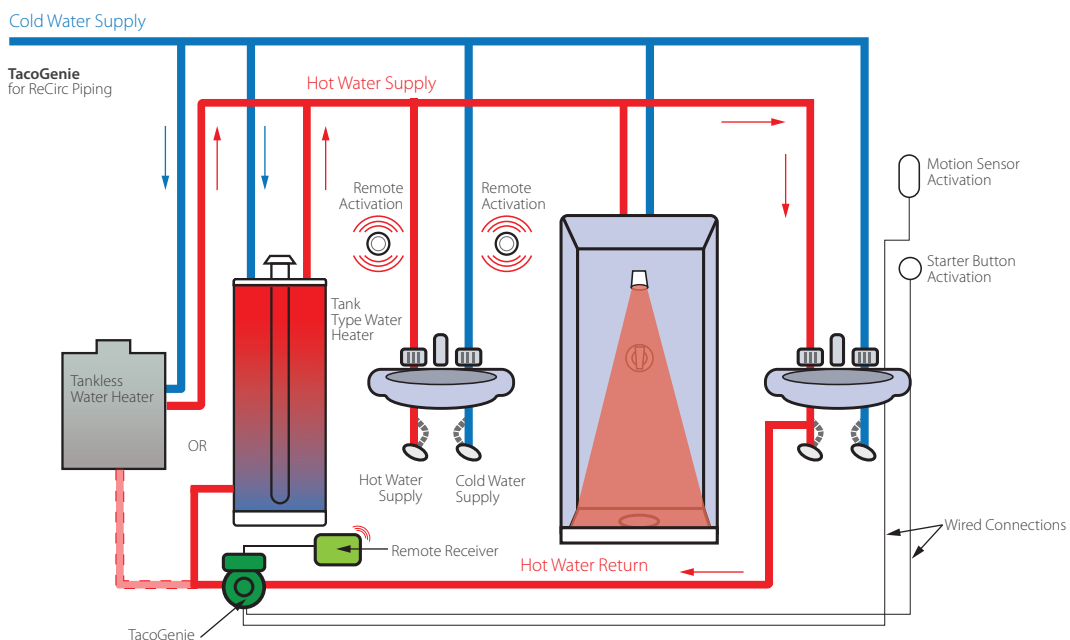

Standard Piping

- Typical plumbing of hot and cold water lines that lead from the source to each point of use.
- TacoGenie circulates hot water from the water heater, and returns the cooled water back through the cold water line. When hot water arrives at the faucet, the TacoGenie heat sensor and control board shut off the pump, conserving water and energy.

Recirculation Piping

- A dedicated return line that recirculates hot water to its source from the point of use, conserving water which would otherwise go down the drain.

Submittal Data Information TacoGenie®

Submittal Data # 101-150
Supersedes: 11/01/14
